## GENERAL MEETINGS

Monday, 5 October at 7:30 pm

Lecturer: Garrie Bromley - Part 2 of the Trip to Ecuador

Monday, 2 November at 7:30 pm

Annual General Meeting

## DAY MEETING

Saturday 17th October 10.30 am

Bring along your friends and family. We will have tasty sandwiches for lunch. Neville Roper will have plants for sale. There will also be a Monster raffle and lucky door prizes.

## President's Message

Our Show season has now come and gone for another year, and I must congratulate you all for the outstanding effort you all made, in producing such wonderful displays at each of our venues.

To the winners...well done, and to those of us who did not win on this occasion... thank you sincerely for taking part, and better luck next year.

I must mention two members in particular, Marko Mihalic and Stephen Lee. Marko produced the Grand Champion entries in both the Bankstown and Bass Hill shows, as well as the Reserve Champion at the Bankstown Show. All 3 of these plants were given Australian and NSW quality awards, (total of 3 HCC awards) - a great effort Marko!

Stephen benched a wonderful little yellow novelty Phalaenopsis hybrid which was rewarded with the Reserve Champion of the Bass Hill show, and was determined by the Judges to be worthy of an Award of Merit (AM) - great job Steve! We look forward to seeing some wonderful Phallies from Steve now that he has a new Phallie House. And to round up my Show report I must thank the many helpers who's continued efforts make me proud to be your President. To name a few, Marj Yabsley, Max Redman, Pat Lee, Dick Wren, Rosa Sessa, Diana Carvey, Lyn Donald, Doris Scott, Stephen Lee, Noreen and Ron, and the many others who willingly lent a helping hand. Special thanks to Kerry Lee who managed the finances from day to day, and also to Sandra Crosby and Tony Costa whose assistance on the set up and throughout the show at Bass Hill should be recognized.

Finally, don't forget our last Day meeting for 2009, it's on 17<sup>th</sup> October, and will include a lovely lunch and special plants from Neville Roper for sale.

Bye for now  
**Veronica Clowes**

### Sale of Orchids

Don Hogan is selling his Orchid collection on 26-27 September only. The address is 6 Bennet St Bass Hill.

### FEES NOW DUE!

**N.B. If not paid by November you will no longer receive the Bulletin**

- Single Pensioner \$5
- Couple \$7
- Couple Pensioner \$6
- Family \$8
- Junior \$1

### HIRE OF SOCIETY TABLES TO MEMBERS

Contact Max Redman 9607 3022

- 1-9 Tables: \$6 each
- 10 or more: \$5 each

Not available during Shows.

All damages will be the responsibility of the Hirer.

### PLANT BENCHING

At monthly meetings all plants must be benched by 7:20pm

## Dockrillia (Courtesy Cumberland Orchid Circle Orchid News)

Dockrillia's are a relatively new genus having been removed from the genus *Dendrobium* only very recently. The name Dockrillia was established as far back as 1981 but it is only in recent years that the name has been accepted. The name Dockrillia honour the Australian orchid authority Alick Dockerill. Dockrillias differ from normal Australian *Dendrobiums* in that the leaves and canes are terete, i.e. have been used to form a solid tube or rat tail. The other noticeable difference is that the blooms are upside down to what we know is normal.

The genus Dockrillia includes about 30 species - 18 of which are found in eastern Australia, 10 in New Guinea and there are also species in New Caledonia and Vanuatu. In Australia they occur as far south as Bicheno in eastern Tasmania and as far north as the tip of Cape York.

Dockrillias are best suited for mounting but a few may be grown in shallow pots. The mounted Dockrillias require a little more water than typical *Dendrobiums* mainly because they are mounted. They prefer bright filtered light and high humidity.

Some of the Dockrillias commonly available are:

- *Dockrillia cucumerina* previously known as *Dendrobium cucumerinum*
- *Dockrillia dolichophylla* previously known as *Dendrobium teretifolium v album*
- *Dockrillia linguiformis* previously known as *Dendrobium linguiforme*
- *Dockrillia racemosa* previously known as *Dendrobium racemosum*
- *Dockrillia rigida* previously known as *Dendrobium rigidum*
- *Dockrillia striolata* previously known as *Dendrobium striolatum*
- *Dockrillia teretifolia* previously known as *Dendrobium teretifolium*
- *Dockrillia pugioniformis* previously known as *Dendrobium pugioniforme*
- *Dockrillia schoenina* previously known as *Dendrobium becklerii*
- *Dockrillia mortii* previously known as *Dendrobium tenuissimum*
- *Dockrillia nugentii* previously known as *Dendrobium linguiforme v. nugentii*

*Dockrillia teretifolia*

*Dockrillia schoenina*

## The Five (or so) Best *Sarcochilus* Crosses by Neville Roper

I was talking orchids, more specifically *Sarcochilus* with Kevin "Grouchy" Wilson over dinner one night when I posed the question "What do you reckon are the five best Sarco. crosses ever made?" Pretty simple question and you would think that the answer would be simple too considering that they are a relatively small group of orchids with only a short period of cultivation and hybridisation. Ultimately we couldn't reach a consensus. There was a temptation to promote the very recent crosses that have been producing exciting results but these crosses have not stood the test of time nor would they be familiar to most orchid folk. For what it is worth here goes with my thoughts on the best five Sarco. crosses that have stood the test of time – their virtues and their vices.

### **Sarco Fitzhart (*hartmannii* X *fitzgeraldii*)**

#### *Virtues*

- ◆ A primary hybrid so it has great growth vigour
- ◆ Prolific flower production
- ◆ Second generation (such as a sibling cross or an outcross between two unrelated Fitzharts) have a high percentage of highly coloured clones. Some have improved flower shape
- ◆ A reasonably fertile parent which has produced some great crosses – Heidi, Jeanne, Fizzy Dove, Sweetheart, Burgundy On Ice
- ◆ A very bright future as a grandparent with credits such as Orange Glow, Hot Ice and Kirra Lea

#### *Vices*

- ◆ As an older cross that was made with the best parents available at the time but which would now be considered to be inferior. Clones from these early crosses are mostly lacking in flower quality.
- ◆ Generally the more intensely coloured clones from the newer sibling crosses tend to be smaller than expected.

### **Sarco. Weinhart (*hartmannii* X *weinthallii*)**

#### *Virtues*

- ◆ Much easier to cultivate than *weinthallii*
- ◆ Flowers are as cute as 'all get out'
- ◆ Great variety of colour forms – yellow, cream or almost white with brown to purple flushing and spots. There are some pure yellow forms
- ◆ Some clones clump and form specimens rapidly
- ◆ Very generous flower production and this usually starts in a 50mm tube
- ◆ Generally have a good shaped flower, some clones are very round and filled-in.
- ◆ Great parent that produces a range of colourful, often spotted flowers on smallish plants – Jeanne, Jewell, Billie, Pixie Pearls which will often flower at different times of the year.

#### *Vices*

- ◆ While easier to cultivate than *weinthallii* some clones are very tardy
- ◆ If size matters then the flowers could be a little on the small side

### **Sarco. Melba (*Hartmannii* X *falcatus*)**

#### *Virtues*

- ◆ Crystalline white flowers with wonderfully contrasting red spots in the centre
- ◆ Large flowers (sometimes very!)
- ◆ Excellently shaped, filled-in flowers
- ◆ Long, elegant racemes of flowers
- ◆ Grows vigorously and will flower off small plants, especially if *falcatus* is the pod parent.

- ◆ Can flower at different times of the year and several times during the year
- ◆ Great parent producing George Colthup, Judith, Melody
- ◆ Proven grandparent with Dove, Burgundy On Ice, Fizzy Dove, Lyn etc to its credit

*Vices*

- ◆ Some clones are progressive flowerers especially when they flower out of season ( not in spring)
- ◆ Some clones, especially the monster flowers are distorted with ridge type tissue along the edges of the sepals
- ◆ In instances where falcatus has been used as the pod parent there is a tendency towards shorter racemes and less filled-in flowers.

**Sarco. Jeanne (Fitzhart x Weinhart)**

*Virtues*

- ◆ Although not as widely available as the above nominations this cross deserves credit for a kaleidoscope of colours from dirty red-browns, vibrant reds, spots, whites, yellows, combinations of the above and even albas
- ◆ Small free-flowering plants
- ◆ Good shaped flowers with crystalline surfaces
- ◆ The early signs are that it will be a good parent –Orange Glow, Molly

*Vices*

- ◆ Smallish flowers
- ◆ Not widely available as it is not an easy cross to get seed from – a reluctant parent
- ◆ Some clones can be touchier to grow than either parent

**Sarco. Judith (Melba x Fitzhart)**

*Virtues*

- ◆ One of the first hybrids not to have a species as a parent and so has a wide diversity of genes.
- ◆ Robust grower which will flower from small plants but will readily form large clumped specimens.
- ◆ Produces long racemes in abundance
- ◆ Typically has crystalline white flowers with varying amounts of red towards the centre although pink clones are not uncommon
- ◆ Generally produce large flowers of considerable substance. Good clones have well filled-in flowers.
- ◆ A reasonably willing parent of quality hybrids such as Burgundy On Ice, Yvonne, Jedda, Norma and Duno Judilly

*Vices*

There are no obvious weaknesses although many of the early Burgundy On Ice clones were shy to flower and when they did the buds on each raceme often opened erratically over several months. Newer crosses seem to have eliminated this fault.

**Sarco Velvet (Nicky X Riverdene)**

*Virtues*

- ◆ Can be in a range of colours from full red to brown or yellow with varying amounts of red at the centre.
- ◆ Multiple flowerings during the year with a more reliable period towards November has lengthened the flowering season towards Christmas
- ◆ Produces large reasonably filled-in flowers of tremendous substance.
- ◆ Showing early signs of being an excellent parent with Bessie (X George Colthup) and Jill (X Fairy) already achieving wins on the show bench.

*Vices*

- ◆ A slow but steady grower.
- ◆ Progressive flowerer with most clones starting out with about six fully open flowers which dwindles over time to one or two flowers on the tip of a very long raceme

**Sarco Cherie (Fitzhart X fitzgeraldii)**

*Virtues*

- ◆ A much easier proposition to grow than fitzgeraldii.
- ◆ Probably the first hybrid to approach the much awaited 'full red sarco.' status, something that some clones approached but few actually achieved. They were dark pink at best but, for their time, very colourful.
- ◆ A major breeding breakthrough as Cherie seemed to be more generous in passing colour genes to its offspring than either of its parents.
- ◆ Some surprisingly rare remakes have produced much more intensely coloured clones with much better flower form – largely due to improvement in the Fitzhart parents.
- ◆ An outstanding parent with offspring such as Redstone, Cherie Snow, Yvette and Yvonne.

*Vices*

- ◆ Early crosses produced smallish flowers with a dominant fitzgeraldii influence featuring ping-pong bat shaped segments.
- ◆ An old cross that has largely been superseded by newer, better hybrids most of which are descendents but never the less deserves a place in this hall of fame.

**Conclusion**

Quite simply, its easy to identify the five best Sarcochilus crosses made so far.

Sarco Nicky Cheer

Sarco Velvet Elise

Sarco Bessie

## Results of Meeting 3rd August 2009

149 plants were exhibited at the meeting

### Best Orchid

R Farrugia Masd Machu Picchu 'Jay Vee'

### Best Novice or Junior

A Tran Dockrilla Teretifolia

### Best Ferns

1st & 2nd J Neubeck

### Best Foliage

1st, 2nd & 3rd S Lee

## Open Section

### Standard Cymbidium (Over 100mm)

1st J&N Janz Cym Lunakira Gleam x Eicho Tower Trinity

2nd J Cameron Cym Hazelfay Mango Daiquiri x Paul Robeson 'Black Heart'

3rd O Maia Cym Amber Sands Harlequin x Khan Wall Windjana

### Intermediate Cymbidium (60mm - 85mm)

1st J Neubeck Cym Gentle Touch Bon Bon

2nd N&J Janz Cym Mem Joan Bryant Harmony x Blazing Fury Hades

### Miniature Cymbidium (Under 60mm)

1st J&N Janz Cym Jessie Blakiston x Last Tango Geyserland

2nd J Kosaras Cym Little Sarah Sweet Charm

3rd M De Nubrega Cym Unknown

### Exhibition Cattleya

An elderly couple had dinner at another couple's house, and after eating, the wives left the table and went into the kitchen.

The two gentlemen were talking and one said, 'Last night we went out to a new restaurant and it was really great. I would recommend it very highly'.

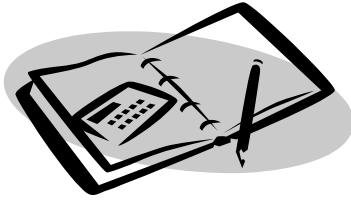

The other man said, 'What is the name of the restaurant?'

The first man thought and thought and finally said, 'What is the name of that flower you give to someone you love? You know ... the one that's red and has thorns'.  
'Do you mean a rose?'

'Yes, that's the one', replied the man.

He then turned towards the kitchen and yelled, 'Rose, what's the name of that restaurant we went to last night?'
